

**Fuel for a
great web
experience.**

Christian Heilmann | <http://wait-till-i.com> | <http://scriptingenabled.org>

La Cantine, Paris, April 2009

**As web developers our job is
to build interfaces.**

**Interfaces that allow people
to reach their goals easily.**

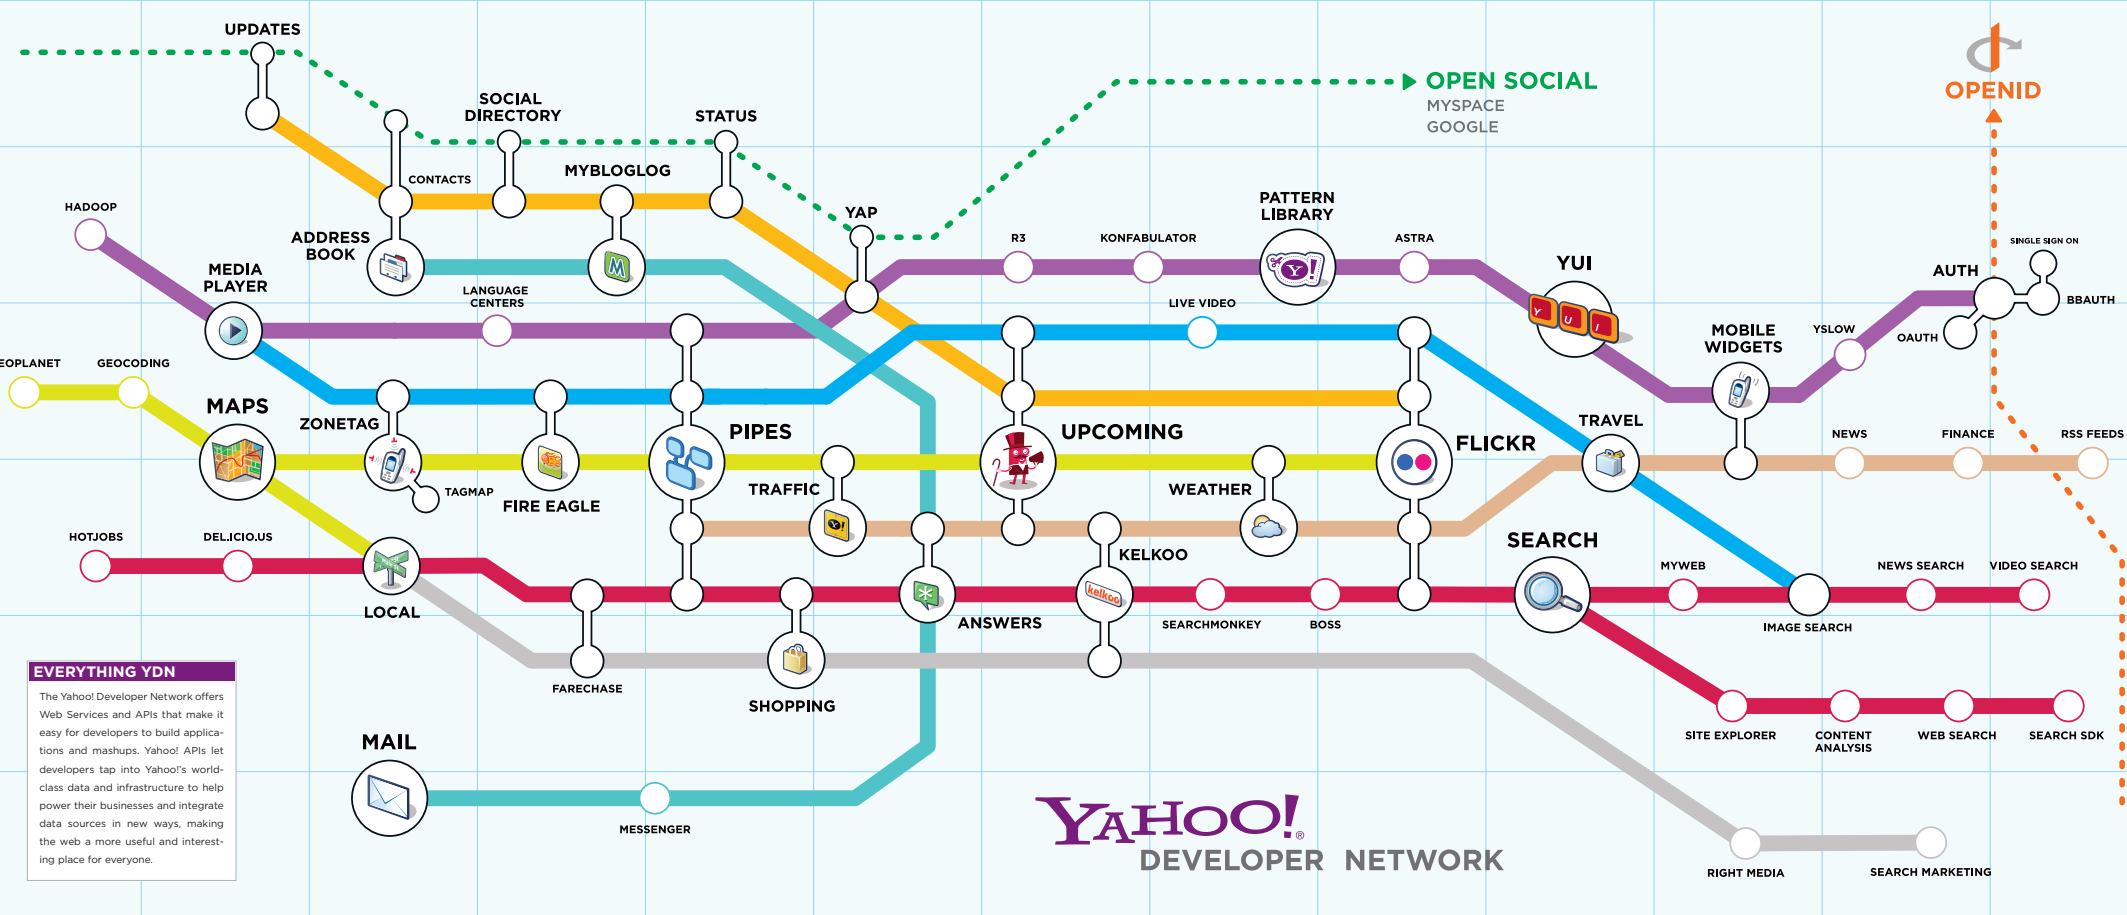

**Today I am here to talk to you
about tools that make it easy
for you to do that.**

**All of which are part of what
we offer you.**

And are free for you to use.

**For all this, you need to
remember one URL:**

YDN Goes Grassroots and Outside the Valley

POSTED APRIL 16, 2009

Here's a quick run-down of some of the places you can find us in April and early May. Yahoo!

developers will be participating in canals and conferences all over the world:

<http://developer.yahoo.com>

Great Indian Developer Summit - April 22-25, Bangalore, India.

JSConf 2009 - April 24-25, Washington, DC.

I will talk about 7 things we offer and how to use them.

**We provide a great online
experience.**

**Yahoo's products are built by
teams of experts who are
passionate about their jobs.**

**We try our hardest to make
things work for everybody
out there.**

**This means first and foremost
to take the time and think
about what we are trying to
achieve.**

Web

Images

Video

Audio

SEARCH

The image shows a search bar interface. At the top, there are four tabs: 'Web' (highlighted in blue), 'Images', 'Video', and 'Audio'. Below the tabs is a long, empty search input field. To the right of the input field is a blue button with the word 'SEARCH' in white capital letters.

Analyse what users want to do here:

**Define type of search,
enter search term,
submit form.**

Search

- ☒ The web
- ☐ For images
- ☐ For video
- ☐ For audio

Then use what allows them to do exactly that.

TV Tonight

JANUARY 21, 2009

Making the new Yahoo! Currency Converter accessible

When my fellow coworker, the user experience designer **Graham Beale**, and I started thinking about the new **Yahoo! Currency Converter** we had a few clear objectives:

- make it as easy as possible to use
- make it work without page reloads
- make it fast
- make it accessible to everyone

For the last, but not at all least, point we were lucky and very happy to have **Artur Ortega** on our team. Artur is not only a brilliant backend engineer but also a screenreader user himself. Without his endless testing and suggesting workarounds, this application would not have been possible.

To arrive at the application you can use today, we went through an intense prototyping and user testing phase with many different iterations. Some of those iterations are still in the converter as parts of our progressive enhancement concept and all of them are based

Welcome

Welcome to the Yahoo! Design Pattern Library. We're thrilled to be sharing pattern code with the web design and development community, we hope it's useful, and forward to your feedback.

In fact, we've just launched two new [Design Pattern forums](#): one for discussing [pattern library](#) and another for talking about the ins and out of [writing design patterns](#) and maintaining collections of patterns. (We've still got our mailing lists. Our goal these new forums is to bring the conversation closer to the library itself. Please join!

Most recently, we've added a collection of [Reputation](#) patterns to our growing collection of social design patterns.

Oh, and we're still pretty jazzed about our [wireframe stencil kit](#). The stencils in it mapped to the patterns in this library and the code modules in YUI.

What's a Pattern?

A pattern describes an optimal solution to a common problem within a specific context.

Recent Patterns [see all...](#)

Calendar Picker
User wants to find or submit a particular piece of information based on a date or between a date range.

Carousel
User needs to browse among a set of like objects represented pictorially.

Collectible Achievements
Some participants in communities respond to opportunities to collect display awards.

The Competitive Spectrum
The designer needs to match the reputation system to the community's degree of competitiveness.

Identifying Labels
Community members need to identify distinguished members of the community.

Leaderboard
In highly competitive communities, users want to know who are very best performers category or overall.

Named Levels
Participants in a community need some way to gauge their own personal development within that community.

Numbered Levels
Participants in a community need some way to gauge how far they've progressed within that community.

Page Grids
Web sites that consistency a common page

Points
In some communities, participants want a tangible measurement of their accomplishments.

Ranking
In highly competitive communities, users may want to compare their performance against that of their peers.

Reputation
The user expects a reputation a insight into their others.

Sign-in Continuity
A user with an account but who is not currently signed in wants to participate by contributing something.

Top X
Participants in some communities welcome the challenge of striving to enter the top tier of competitors.

Submit Submission
User wants to particular piece a community submissions.

Join Our Design Pattern Community

**These are available to you,
too.**

<http://developer.yahoo.com/everything.html>

**We share the research we've
done to make it a smooth
experience.**

The exceptional performance section of YDN provides detailed information on how to make your products behave faster.

Exceptional Performance

Yahoo!'s Exceptional Performance team evangelizes best practices for improving web performance. They conduct research, build tools, write articles and blogs, and speak at conferences. Their best practices center around the rules for high performance web sites.

Best Practices

The Exceptional Performance team has identified a number of [best practices](#) for making web pages fast. The list includes 34 best practices divided into 7 categories.

Filter by category: [Content](#) | [Server](#) | [Cookie](#) | [CSS](#) | [Javascript](#) | [Images](#) | [Mobile](#) | [All](#)

YSlow for Firebug

YSlow analyzes web pages and tells you why they're slow based on the [best practices](#) for high performance web sites. YSlow is a [Firefox add-on](#) integrated with the popular [Firebug](#) web development tool. This tool has helped improve the performance on over 50 Yahoo! properties by 25-50%. We're pleased to be able to share this with the development community so that others can join us in accelerating the user experience on the web!

The Yahoo! User Interface Library (YUI)

The YUI Library is a set of utilities and controls, written in JavaScript, for building richly interactive web applications using techniques such as DOM scripting, DHTML and AJAX. YUI is available under a [BSD license](#) and is free for all uses. The YUI project includes the YUI Library and two build-time tools: [YUI Compressor](#) (minification) and [YUI Doc](#) (documentation engine for JavaScript code).

Download YUI: Download YUI version 2.7.0, including [full API documentation](#) and [more than 300 functional examples](#) from [YUILibrary.com](#).

A [preview release of YUI's next-generation 3.x codeline](#) is also available. YUI 3.x is not production-ready, but we're looking forward to your feedback [on the YUI 3 forum](#) as we prepare this new codeline for a 2009 GA release.

The library's developers blog [at the YUI Blog](#) and the YUI Library community exchanges ideas at [YDN-JavaScript on Yahoo! Groups](#).

Using YUI:

Unlike other frameworks YUI is not a catch-all solution but is cut up into modules, each fulfilling one job.

YUI Core:

- [The YAHOO Global Object](#)
(base requirement for all YUI components)
- [DOM Collection](#)
(convenience methods for DOM interactions)
- [Event Utility](#)
(event normalization and custom events)

YUI Library Utilities:

- [Animation Utility](#)
- [Browser History Manager](#)
- [Connection Manager](#) (for XHR/Ajax)
- [Cookie Utility](#)
- [DataSource Utility](#)
- [Drag and Drop Utility](#)
- [Element Utility](#)
- [Get Utility](#)
(dynamic script/css loading)
- [ImageLoader Utility](#)
- [JSON Utility](#)
- [Resize Utility](#)
- [Selector Utility](#)
- [StyleSheet Utility](#)
BETA
- [The YUI Loader Utility](#)

**You can use any of these
modules on their own, even
together with other libraries.**

**We've used these modules to
create reusable widgets
based on our design patterns.**

The YUI widgets come with an own style that can be fully customised.

Understanding YUI Skins

By Nate Koechley
Yahoo! Inc.
August 1, 2007

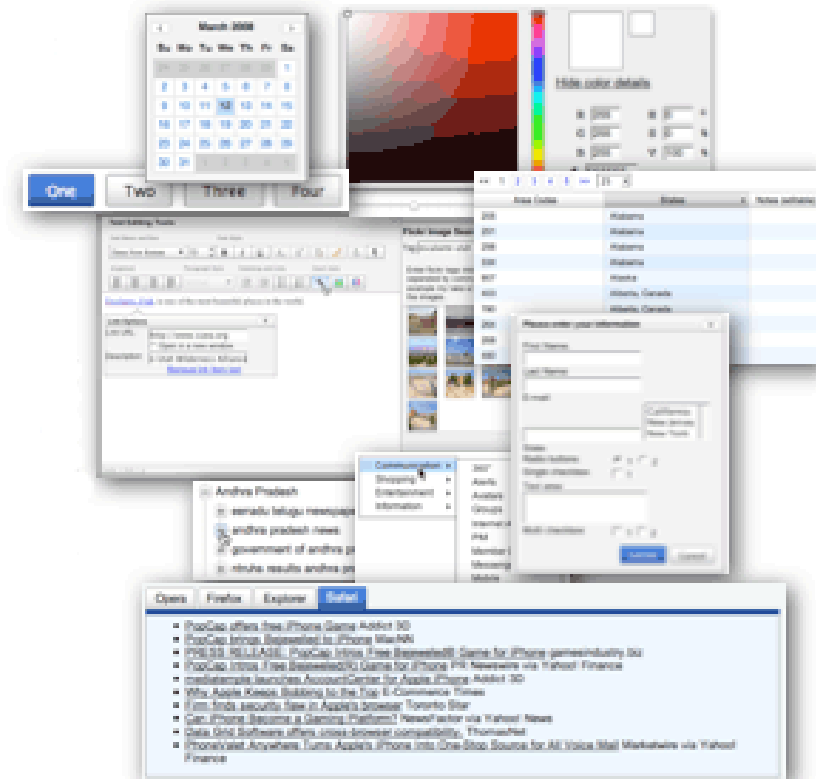

The visual presentation of YUI controls is defined with CSS. YUI version 2.3.0 includes a new, cohesive, visual look and feel, or skin. We call this skin "Sam" as a thank you to talented designer Sam Lind for creating it and working with the YUI team to see it implemented.

Using YUI Skins

There are two steps to using YUI skins. First, add the skin's class name to your document, or regions of your document. Second, link in the skin's CSS file.

CSS rules for skins are "namespaced" under contextual selectors based on the skin name, in this case "yui-skin-sam." You can apply the skin to the full document or just to specific regions or controls.

To apply the Sam Skin to an entire page, add a "yui-skin-sam" class value to your body element:

<http://developer.yahoo.com/yui/articles/skinning/>

**They all are event driven
which means you can change
their workings without
changing their code.**

AutoComplete Control: Basic Remote Data

This AutoComplete implementation points to an online script that serves a data as delimited plain text. Enabling caching on the DataSource can reduce trips to the server and speed performance for repeated queries.

Grade **A** Overall performance score 96 Ruleset applied: Small Site or Blog URL: http://icant.co.uk/

ALL (14) FILTER BY: CONTENT (5) | CSS (5) | IMAGES (2) | JAVASCRIPT (3) | SERVER (1)

A Make fewer HTTP requests

B Compress components with gzip

A Put CSS at top

A Put JavaScript at bottom

A Avoid CSS expressions

D Reduce DNS lookups

A Minify JavaScript and CSS

A Avoid URL redirects

Grade A on Make fewer HTTP requests

This page has 3 external stylesheets. Try combining them into one.

Decreasing the number of components on a page reduces the number of HTTP requests required to render the page, resulting in faster page loads. Some ways to reduce the number of components include: combine files, combine multiple scripts into one script, combine multiple CSS files into one style sheet, and use CSS Sprites and image maps.

Logger Control: Using LogWriter

Using LogWriter.

Example: Log messages into different categories

By default, unsourced log messages get assigned to a "global" bucket.

- Log an "info" message.
- Log a "warn" message.
- Log an "error" message.
- Log a "time" message.

Example: Log messages into different categories and assign them to a source called myBucket

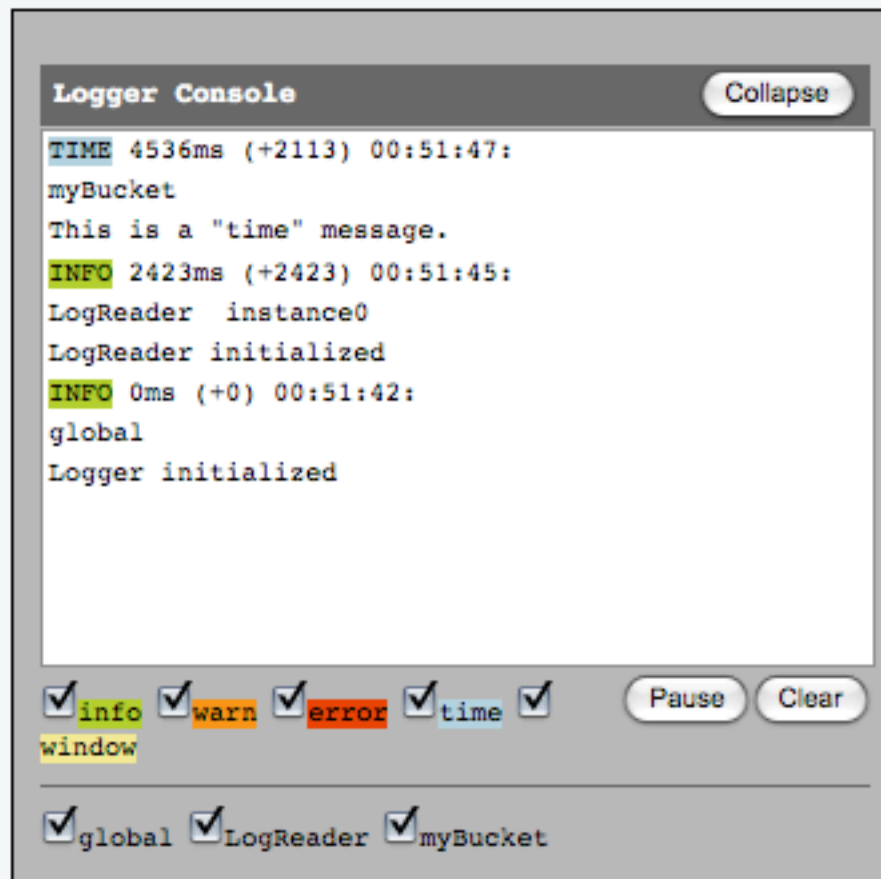

You can assign a source to a log message by passing it in as the third argument to `YAHOO.log()`.

- Log an "info" message.
- Log a "warn" message.
- Log an "error" message.
- Log a "time" message.

Example: Create a LogWriter to write log messages from a class named MyClass

If you plan to assign many log messages to the same source (such as from a class), it may be easier to write log messages from a LogWriter instance.

- Log an "info" message.
- Log a "warn" message.
- Log an "error" message.
- Log a "time" message.

<http://developer.yahoo.com/yui/logger/>

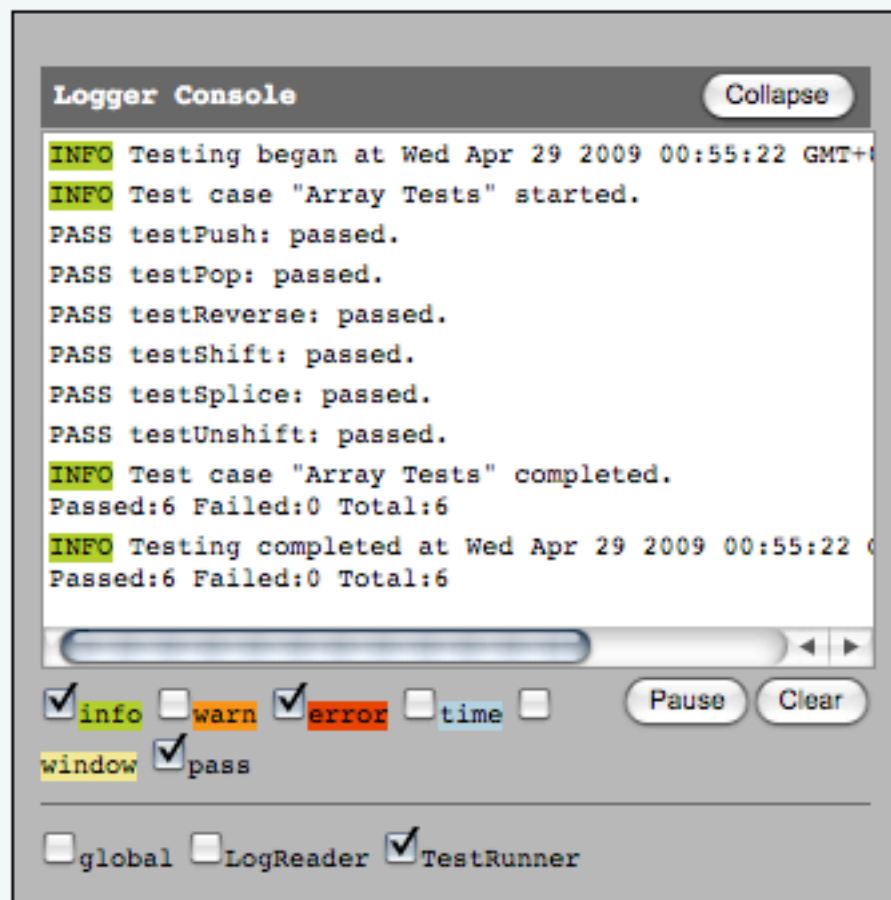

Function/Method	Calls	Average	Shortest	Longest	Total Time ▾	Percent

YUI Test Utility: Array Processing

This example shows how to use the [ArrayAssert](#) object, which contains assertions designed to be used specifically with JavaScript Arrays and array-like objects.

[View example in new window.](#)

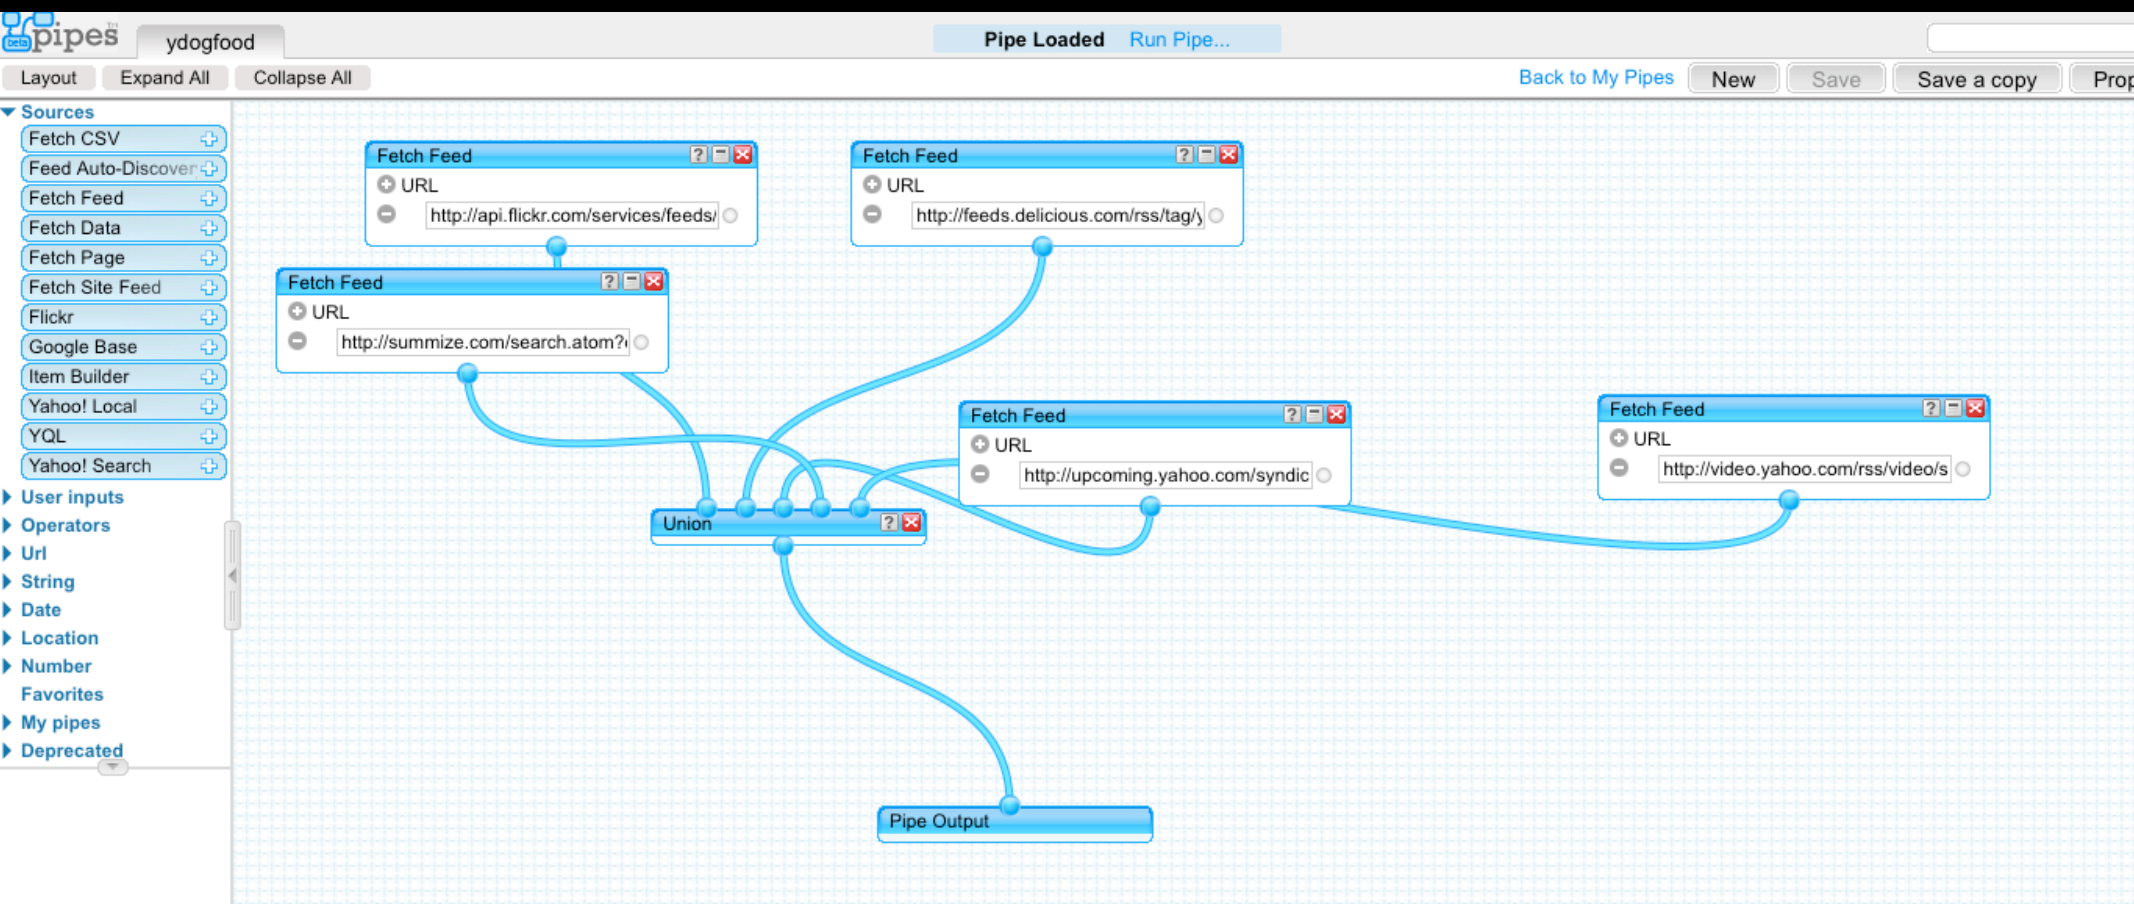

<http://developer.yahoo.com/yui/yuitest/>

**We offer amazingly easy
interfaces to the web.**

First there was Pipes.

<http://pipes.yahoo.com>

However, Pipes was too complex and not flexible enough as you cannot change a pipe programmatically.

**So we came up with a query
language for the web: YQL.**

**Say you want to get photos of
Paris that you are allowed to
show in your own products.**

**You need to define Paris
without a doubt.**

```
select woeid from  
geo.places where  
text='Paris,france'
```

Then find photos that were taken there.

```
select id from flickr.photos.search  
where woe_id in (select woeid from  
geo.places where  
text='paris,france')
```

**Check that they have the
right license.**

```
select id from flickr.photos.search  
where woe_id in (select woeid from  
geo.places where  
text='paris,france') and license=4
```

**And get all the information
about them.**

```
select * from flickr.photos.info  
where photo_id in (select id from  
flickr.photos.search where woe_id in  
(select woeid from geo.places where  
text='paris,france') and license=4)
```

I took this pic last December.. There was nobody !!

[View On Black](#)

Written by [Christian Heilmann](#), powered by [YUI](#), [YQL](#), [Flickr](#) and [Yahoo Maps](#)

<http://isithackday.com/hacks/cantine/index.php?loc=paris,france>

**All without having to spend
hours on reading either the
Flickr or the GeoPlanet API
docs :)**

**Using YQL and YUI you can
create a whole web site
maintained elsewhere.**

About this and me

Hello, I am Christian Heilmann, a Developer Evangelist living and working in London, England.

This site has [traditionally been my repository of online articles](#) but as times change and I am too busy to maintain it all it now is a repository of my talks, videos and other bits and bobs I share on the web.

I work for the [Yahoo Developer network](#) and I am [available as a speaker for your events](#).

This site is dynamically generated from several web resources using [YQL](#).

The photo on the left was taken by [Hugues Moreno](#) at the Paris Web conference 2009.

Upcoming Events

Want to see me speak? Here's where I will be in the nearer future.

27/03/09 - Frankfurt, Germany - European Accessibility Forum

06/04/09 - 10/04/09 Sunnyvale, California, US - DOM Training

17/04/09 - 19/04/09 Taiwan - Uni Hack Day and OSDC

[20/04/09 - 24/04/09 Melbourne, Australia and Sydney, Australia - Web Directions Workshops](#)

[Check out the event archive](#)

Presentations

Here are my latest presentations, hosted on SlideShare for you to re-use.

The road to professional web development

My presentation in Taiwan about the

Accessible web applications

My presentation at the panel on

Georgia Tech hacking Accessibility

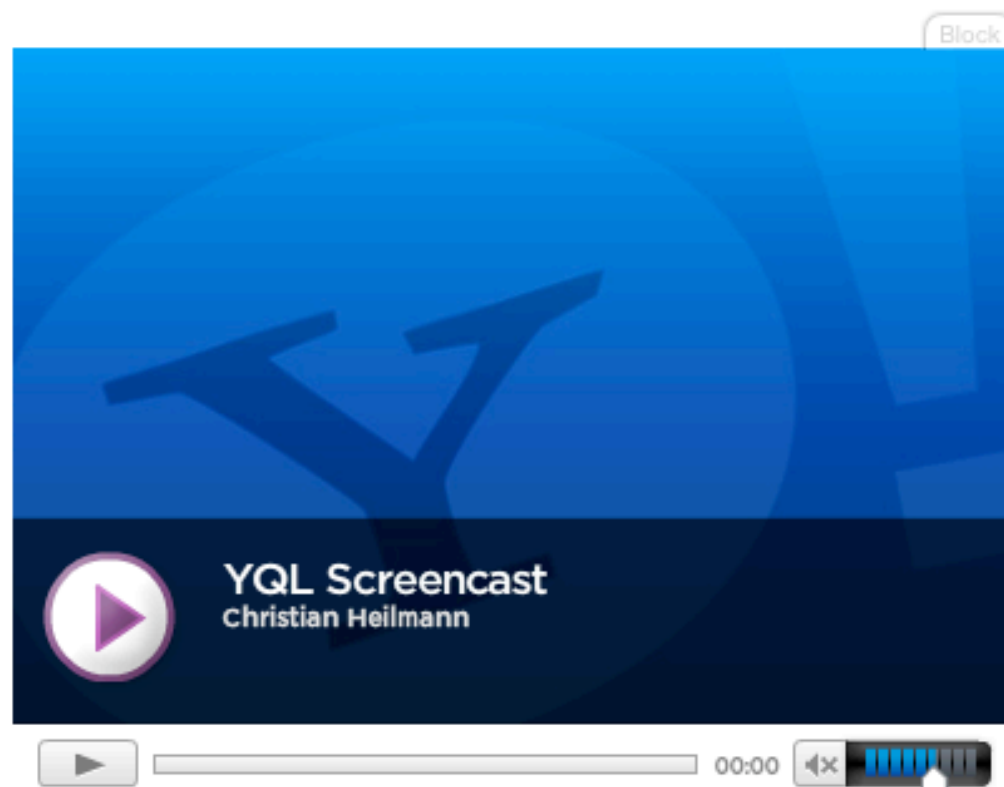

APRIL 10, 2009

Screencast: Collating distributed information with YQL

In order to reach the most people on the web, it is a good idea to distribute your information. That way you can reach all kind of specialized audiences. On the flipside you also spread yourself thin and people will miss some of the goodies you put out on the web.

In this screencast tutorial you'll see how I built my home on the web, <http://icant.co.uk> the lazy way by using **YQL** to gather data from all kind of sources and **YUI grids** to display them in a single interface.

If you can spare 15 minutes of your time check out the screencast below to learn how to build a site like icant.co.uk from data stored on Slideshare, Delicious and on a Wordpress based blog with a few dozen lines of PHP.

**YQL makes access to all kind
of APIs very easy.**

**What if you want to add
yours?**

YQL has a concept of “Open Tables”.

**This means you can tell us
about your API endpoint and
parameters in an XML
schema...**

**...point to this schema and
use it as a table in YQL.**

For example: Twitter.

```
1 <?xml version="1.0" encoding="UTF-8"?>
2 <table xmlns="http://query.yahooapis.com/v1/schema/table.xsd">
3   <meta>
4     <author>Paul Daniel</author>
5
6     <documentationURL>http://apiwiki.twitter.com/REST+API+Documentation#show</docu
7     mentationURL>
8   </meta>
9   <bindings>
10     <select itemPath="feed.entry" produces="XML">
11       <urls>
12         <url>http://twitter.com/statuses/user\_timeline/{id}.atom</url>
13       </urls>
14       <paging model="page">
15         <start default="0" id="page"/>
16         <pagesize max="200" id="count"/>
17         <total default="20"/>
18       </paging>
19       <inputs>
20         <key id="since" type="xs:string" paramType="query" />
21         <key id="since_id" type="xs:string" paramType="query" />
22         <key id="id" type="xs:string" paramType="path" required="true"/>
23       </inputs>
24     </select>
25   </bindings>
26 </table>
```

Yahoo! Search BOSS

BOSS (Build your Own Search Service) is Yahoo!'s open search web services platform. The goal of BOSS is simple: to foster innovation in the search industry. Developers, start-ups, and large Internet companies can use BOSS to build and launch web-scale search products that utilize the entire Yahoo! Search index. BOSS gives you access to Yahoo!'s investments in crawling and indexing, ranking and relevancy algorithms, and powerful infrastructure. By combining your unique assets and ideas with our search technology assets, BOSS is a platform for the next generation of search innovation, serving hundreds of millions of users across the Web.

How Do I Get Started?

1. Check out BOSS specs and mash-up examples below
2. Review the [documentation](#)
3. Get a [BOSS Application ID](#)

<http://developer.yahoo.com/search/boss/>

OVERVIEW

Search APIs are nothing new, but typically they've included rate limits, strict terms of service regarding the re-ordering and presentation of results, and provided little or no opportunity for monetization. These constraints have limited the innovation and commercial viability of new search solutions.

**So there you have it – 7 things
we offer you as developers to
use and learn from.**

**We're improving our work by
getting your feedback and
seeing your implementations.**

And you can build much better products by basing them on working solutions and concentrating on the delivery of your products rather than problems we already had to solve for you.

**Come and grab and show us
what you can do!**

Thanks.
